

CONSTRUCTION NOTICE

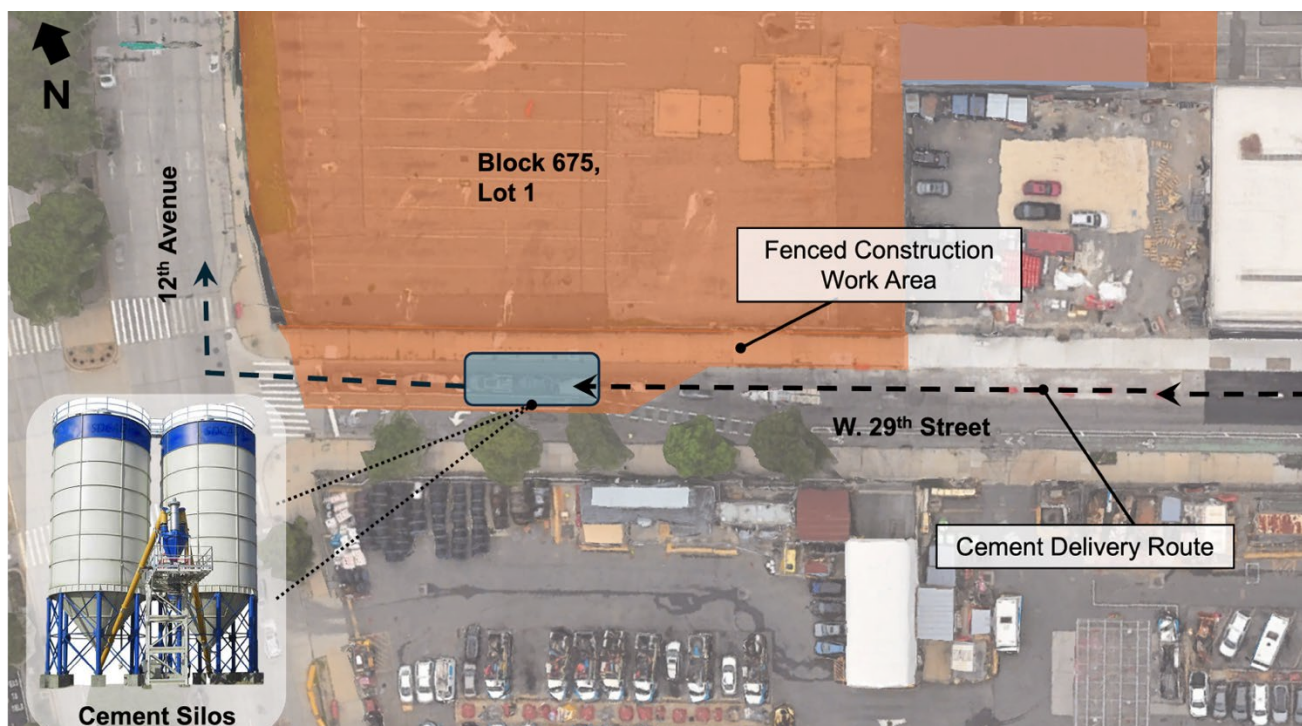

WHAT: New Cement Equipment Installed Within Staging Site

WHERE: W. 29th Street near 12th Avenue

WHEN: As soon as October 14, 2025
In place for the duration of construction through 2029

GDC's contractor will install the first two of six cement silos within the construction work area on W. 29th Street between 11th Avenue and 12th Avenue. The contractor will use this equipment as part of the slurry wall construction which will support the tunnel access shaft. Passersby will see the silos, which will be 34 feet tall, above a 10-foot construction fence. Four additional silos will be installed in the coming months as part of the jet grouting operation which will strengthen the ground under Manhattan.

Cement delivery trucks will approach the westbound portion of W. 29th Street that is closed to through traffic and will then use a hose to connect to a silo. To minimize dust, transfer hoses are sealed and have built-in filters. To minimize noise, silo pumping activities will only occur when trucks are on site filling the silos. All cement trucks will exit westbound onto northbound 12th Avenue through a designated gate.
